Business Insights

1. **Revenue & Sales** : The business maintains healthy revenue growth, driven by strong customer demand, high-performing product categories, and a small group of best-selling products.
2. **Customer Behavior** : A large portion of revenue comes from repeat and premium customers, indicating strong customer loyalty and retention.
3. **Delivery Performance** : Most orders are delivered on time, but delayed deliveries continue to impact customer satisfaction and operational efficiency.
4. **Customer Experience** : Customer ratings and feedback indicate generally positive experiences, although delivery delays and service quality remain key improvement areas.
5. **Marketing Performance** : Marketing campaigns generate positive returns, but campaign performance varies across channels, suggesting opportunities to optimize marketing spend.
6. **Inventory Management** : Inventory replenishment remains consistent; however, damaged stock contributes to unnecessary inventory losses and increased operational costs.
7. **Regional Performance** : Revenue is concentrated in a few high-performing regions, while several areas show untapped growth potential.
8. **Product Performance** : A limited number of products contribute a significant share of total revenue, following the Pareto (80/20) principle common in retail businesses.

Business Recommendations

Increase inventory levels for top-selling products to prevent stockouts and maximize sales opportunities.

Allocate more marketing budget to channels delivering the highest ROAS while reducing spend on underperforming campaigns.

Improve delivery operations by optimizing routes, monitoring delay reasons, and increasing on-time delivery performance.

Strengthen customer experience through faster deliveries, proactive issue resolution, and loyalty programs for repeat customers.

Expand promotional campaigns in low-performing regions to increase market penetration and regional revenue.

Reduce damaged stock through improved warehouse handling, quality inspections, and inventory control processes.

Use demand forecasting to align inventory planning with seasonal sales trends and avoid overstocking or stock shortages.

Increase Average Order Value (AOV) by introducing bundle offers, personalized recommendations, and cross-selling strategies.

Continuously monitor campaign performance using CTR, Conversion Rate, and ROAS to improve marketing efficiency.

Build an executive performance review process using this Power BI dashboard to support faster, data-driven business decisions across sales, operations, marketing, and inventory.
